**(54) METHOD AND DEVICE FOR SCANNING CAPABLE OF CONTROLLING LIGHT OUTPUT AND SCANNING ANGLE**

(57)Abstract:

**PURPOSE:** To facilitate correction in accordance with uses by using a laser availability signal to control the gain characteristic.

**CONSTITUTION:** When the signal from a photodetector 15 is applied to a detection circuit 17, a feedback signal is sent to an amplifier/digitizer 16, and the laser availability signal which corrects the light output from a light source 11 or changes the scanning angle is sent to a control part 14 to start a decoding circuit 18. The laser availability signal is used as the feedback signal to control the gain characteristic of the amplifier/digitizer 16.

## LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]
